Transform your network with the world's No.1 SD-WAN technology delivered by the UK's leading SD-WAN solution provider.

An intelligent Network that makes the internet work better. Powered by the worlds leading SD-WAN technology.

We're revolutionising site connectivity, combining best of breed high speed networks with a myriad of end point connectivity methods meaning that nowhere is out of reach.

We simplify complexity with our ability to deliver & support both the overlay and underlay of your network, alongside your organisation's entire IT requirements.

"If we were to compare our experiences familiar with, working with Panoptics always get to the people you need to, This level of service means a lot to A for money from the suppliers we engaged achieved with this project

Phil Casson, Network Analyst, Aggregate In

A truly innovative and flexible solution

VMware SD-WAN makes the Internet work better by addressing the challenges of traditional WAN. By enabling companies to select from a flexible range of connections, from ordinary broadband Internet to private circuits, our solution assures enterprise and cloud application performance while simplifying deployments and reducing costs.

Dramatically reduce your bandwidth costs and regain control of your network. VMware SD-WAN is an optimised 'Cloud Delivered' solution that offers...

Flexible Deployment Options – Supports a variety of deployment options to fit your business (cloud, on premise, appliance, software)

No Risk, At-Your-Pace Migrations – Start with a few sites and expand as required

Low Total Cost of Ownership – Significant CAPEX and OPEX savings and faster time-to-value

As the UK's leading VMware SD-WAN partner, Panoptics are experts in deploying a choice of public, private or hybrid cloud networks benefitting from high performing, reliable branch office connectivity to any number of network edges, all orchestrated and managed from a single point.

Our solution provides bandwidth expansion as well as direct optimal access to enterprise & cloud applications, as well as data. It also enables virtual services insertion in cloud and on premise with ease.

A unique approach to SD-WAN

Imagine a partner who can not only design your wide area network, but also implement, support and extended it into the data centre and traditional LAN deployments. As a Panoptics SD-WAN customer, we move the conversation from the network being the bottle neck, to the network being the enabler.

Our approach to SD-WAN is quite simply what sets us apart.

- **We design your SD-WAN for you, not us** – we do not lock you in with additional services or our own connectivity (unlike competitors)
- **We're 100% agnostic with 3rd party transit** – which means you can achieve true resilience by not relying on a single supplier
- **We're far more than just the UK's leading VMware SD-WAN partner** – our capabilities are broad and we can help your entire organisation get the most from its IT

Hardware & Software

Underpinned by cutting edge Hardware & Software our partnership with SD-WAN global market leader, VMware, enables simple, agile and secure branch office wide area networks utilising the worlds most advanced technology.

From VMware SD-WAN Gateways & VMware SD-WAN Orchestrator to VMware SD-WAN Edge's, you can rest assured your entire SD-WAN technology requirements can be fulfilled by the UK's leading supplier.

SD-WAN Architecture

Built on Software Defined Networking (SDN) principles, VMware SD-WAN architecture originated in the cloud and is the only SD-WAN solution delivered with a separate orchestration plane, control plane and data plane using a secure and scalable cloud network.

Professional Services

Panoptics deliver a range of SD-WAN professional services built upon our long held belief that VMware SD-WAN is the most comprehensive and advanced SD-WAN solution on the market. Combining an in-house team of SD-WAN certified experts with real world deployment experience, Panoptics ensures every SD-WAN scoping, implementation and management project runs smoothly, efficiently and to plan.

Our experienced team are here to provide a fully supported service throughout every SD-WAN project lifecycle, with a complete range of consultancy services to cover all aspects of solution deployment and migration including:

- **Planning**
- **Design & Architecture**
- **Configuration**
- **Operational integration**
- **Validation**
- **Post Delivery Support**

Our team of experts deliver a wide range of planning, design, deployment, and benchmarking services designed to ensure service configurations are tuned to the specific use case and facilitate seamless integration with an organisation's wider infrastructure to ensure maximum ROI from your SD-WAN investment.

Connectivity

Panoptics prides itself on delivering a complete SD-WAN solution that takes global organisations, every step of the way, to the network edge. So, whatever region, country or continent your branch offices are located in, we have a connectivity solution for you.

Our service, unlike many providers, is one of the only to include full scoping and support of the physical connectivity requirements to facilitate SD-WAN. This service is based on the challenges we understand global organisations face in the deployment of SD-WAN and is offered to both simplify and optimise each and every SD-WAN connection your organisation requires.

Whilst Panoptics do offer a range of enterprise connectivity options to suit your own SD-WAN, we do not mandate that these services are taken as part of the solution. This standpoint sets us apart from other SD-WAN vendors as we strongly believe it is imperative to have the flexibility in the design to meet your specific requirements and achieve genuine resilience.

- **Access regional connectivity expertise and industry knowledge**
- **Simplify the resourcing of global connectivity**
- **Obtain the best connectivity solutions for your branch offices – regardless of location**
- **Review the best options based on value for money, availability, resilience and performance**
- **Easy to evaluate on a Site by Site basis**

Best Connectivity Review

By starting with a comprehensive Best Connectivity Review, our team of network engineers will generate a complete picture of your current connectivity situation per site, as well as outline other viable options, including DIA, Broadband and Mobile connections, your organisation can select from to optimise your SD-WAN deployment. With our experience of both UK and global SD-WAN connectivity options, our SD-WAN experts will then be able to advise exactly what connections match your network requirements on a Site by Site basis, all the while ensuring your organisation's overall network objectives are fully met.

Support

With an understanding that not every business is alike and supporting a critical network can be a genuine drain on an organisations IT resources, Panoptics delivers comprehensive, around the clock, support for our SD-WAN installations. Providing precisely the level of support your organisation and network requires, our service ensures your SD-WAN solution is always optimised and operational, whilst your staff have the confidence that any SD-WAN issue can be looked at and resolved quickly, by a team of VMware SD-WAN certified experts.

Our experience of delivering cutting edge Software-Defined Wide Area Networks around the globe has resulted in a genuine appreciation of the complexities some organisations experience in the deployment and management of a SD-WAN solution. As a result, we offer our SD-WAN expertise on tap to organisations looking to effortlessly plug internal skills gaps, seamlessly deploy a SD-WAN solution or require a fully supported SD-WAN experience.

Our SD-WAN support services ensure your business can concentrate on the business itself and not the network which is running it. As such, our support services are tailored to your organisation's specific requirements and can include:

- **Scoping and requirements support**
- **Implementation support**
- **Branch office support**
- **Network optimisation and management**
- **Network user support**

Proof of Concept

If you're interested in understanding the benefits of SD-WAN first hand, get in touch to discuss a PoC with our team of VMware certified experts.

We're always available to discuss any IT Project and would welcome the opportunity to talk it through. Get in touch now and we're confident we will find the perfect solution for your business.
